Physical	Dancing
Mental	Beading

Medicine Wheel

The emotional, spiritual, physical, and mental costs of accessing healthcare in rural communities were assessed in alignment with the **Medicine Wheel**, a holistic Indigenous framework. These costs were calculated by considering patient experiences beyond financial burdens, incorporating **emotional distress (e.g., stress, anxiety)**, **spiritual impacts (e.g., loss of connection to land and community)**, **physical burdens (e.g., travel fatigue, long wait times)**, and **mental strain (e.g., cognitive load of managing care)**. This approach ensures a comprehensive understanding of healthcare access challenges and their broader effects on well-being.

Land Connection and Medicine Wheel

The **Medicine Wheel** is a sacred Indigenous teaching that represents balance and interconnectedness among emotional, spiritual, physical, and mental well-being. **Land-based healing** is an Indigenous-led practice that fosters wellness through connection to nature, culture, and traditional knowledge. These teachings remind us that health is not just the absence of illness but the presence of harmony in all aspects of life.
